

Lesson 4 - Solving Inequalities - Two-Step & Multi-Step

You can solve two-step inequalities in the same way you solve two-step equations.

The goal is to isolate the variable.

Solve each inequality.

1) $6m + 7 < -5$

$$\begin{aligned} \cancel{6m} + 7 &< -5 \\ \cancel{6m} &< -12 \\ m &< -2 \end{aligned}$$

2) $-\frac{x}{4} + 8 \geq 11$

$$\begin{aligned} \frac{x}{-4} + 8 &\geq 11 \\ \frac{x}{-4} &\geq 3 \\ \cancel{\frac{x}{-4}} &\geq 3(-4) \\ x &\leq -12 \end{aligned}$$

Practice

Solve each inequality.

1. $17 \leq 3w - 4$

$$\begin{aligned} 21 &\leq 3w \\ 7 &\leq w \end{aligned}$$

2. $\frac{y}{-2} - 8 < -6$

$$\begin{aligned} -2\left(\frac{y}{-2}\right) &< (-2)(-6) \\ y &> -12 \end{aligned}$$

3. $-2r - 10 > 6$

$$\begin{aligned} -2r &> 16 \\ r &< -8 \end{aligned}$$

Word Problem

You borrow \$150 from a friend to help pay for a new skateboard. You pay your friend back \$15 per week. Write and solve an inequality to find when you will owe your friend less than \$30.

$$\begin{aligned} 150 - 15w &< 30 \\ -150 & \end{aligned}$$

©Exceeding The CORE

$$\begin{aligned} -15w &< -120 \\ w &> 8 \end{aligned}$$

Multi-Step Inequalities

$$-8(3 + s) \geq 32$$

$$\begin{aligned}
 & \cancel{-24} - 8s \geq 32 \\
 & \quad \quad \quad +24 \quad \quad \quad +24 \\
 & \quad \quad \quad \hline
 & \quad \quad \quad -8s \geq 56 \\
 & \quad \quad \quad \hline
 & \quad \quad \quad s \leq -7
 \end{aligned}$$

$$4 + 5x < \cancel{12x} - 10$$

$$\begin{aligned}
 & \cancel{-12x} - 7x < \cancel{-12x} - 10 \\
 & \quad \quad \quad \hline
 & \quad \quad \quad -7x < -10 \\
 & \quad \quad \quad \hline
 & \quad \quad \quad x > \frac{10}{7}
 \end{aligned}$$
